RTM Enterprises, Inc.- Saving Your Energy Dollars Ron Marconi

AUDIT - When a Business provides one copy of its gas, electric and telephone phone bills, we then are able to legally audit the previous six years to verify that these invoiced charges were accurate. If correct the audit is "FREE". If overcharges exist the entire amount plus any interest accrued (1.5% compounded monthly) is "PAID" directly to the client. In turn the client then refunds a portion of the recovered overcharges. *No business is too small or large for our services.*

SOURCE ALTERNATE UTILITY SUPPLIERS - Currently eight states in the U.S. allow commercial businesses to choose alternate gas and electric suppliers. This program is called deregulation. Several other states are also in the process of allowing customers to buy their gas and electric from these deregulated companies called ESCO'S (Energy Service Companies). The gas and electric continues to be delivered by their current company, which already has the delivery system in place. There is no interruption in the delivery of your gas and electric as your current provider continues to be responsible, by state laws, to continue to troubleshoot and resolve any and all problems that your business may encounter. The savings range between 3% and 30% depending on company size. *Call us today to see if your state participates.*

REVENUE FOR ENERGY CONSERVATION - This is currently a New York State program sometimes known as Curtailment ". Commercial businesses are paid for limiting their use of electricity. A 21-hour alert is provided to member companies. When they reduce their electrical use by their "contracted amount." They will receive a check for as little as \$300-\$400 twice annually or as high as \$300,000, \$400,000, \$500,000 or more twice annually depending on your electrical reduction. There are two mandatory tests annually plus a possible 0 – 3 additional tests throughout the year. *This is especially attractive for companies with back up generators.*

MANAGE UTILITY SUPPLIERS - Companies with multiple locations, either within a given state or nationally, often prefer not to deal with the task of sourcing and paying multiple gas and electric bills; in addition to analyzing the market in those states that have deregulation. Let us source all your gas and electric needs, provide you with one monthly invoice and have 24-hour web based access to review your energy use by location.

IMPROVED ELECTRIC EFFICIENCY - Those Companies that have electric bills that exceed \$50,000 or more monthly will benefit from this program. Our capacitors are "Guaranteed" to reduce your electrical consumption by a contracted amount or your firm will receive a check for the difference. A no obligation visit by our engineers will review your facility to verify if it will benefit from our program. A detailed quote "Guaranteeing the Savings" and pay back period will then be presented to the customer.
